

ARTIFICIAL INTELLIGENCE AND YOUR JOB SEARCH AND JOB APPLICATION JOURNEY

From writing your resume for you to automating networking emails, there are tons of ways A.I. can help streamline your job search.

NEED A JOB?

Artificial Intelligence And Your Job Search And Job Application Journey

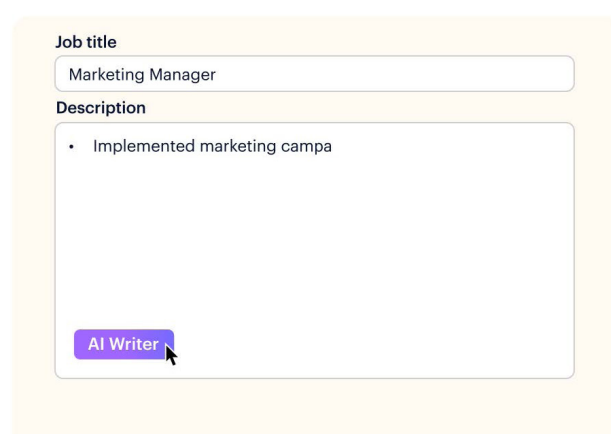

From writing your resume for you to automating networking emails, there are tons of ways A.I. can help streamline your job search. But more importantly, A.I. can also help you cut through the noise, secure interviews, and impress hiring managers—as long as you use it well. When you know what you are doing with these tools, A.I. presents 5 mission critical advantages for the job seeker, and they are:

1. Speeds up the job search process by impacting key elements of the journey.
2. Provides personalised job matching - better match between right candidate & company.
3. Easier to research and understand the demands of the role.
4. Assistance with the preparation for interviewing and following up.
5. It even helps with the verification and onboarding process.

How to use AI to find and land a job

Condensing an entire job into three high-impact bullet points is no easy feat, and if you're like most humans, there's nothing you dread more than talking about yourself. I've easily lost hours staring at a blinking cursor, writing, deleting, rewriting, condensing—and on and on.

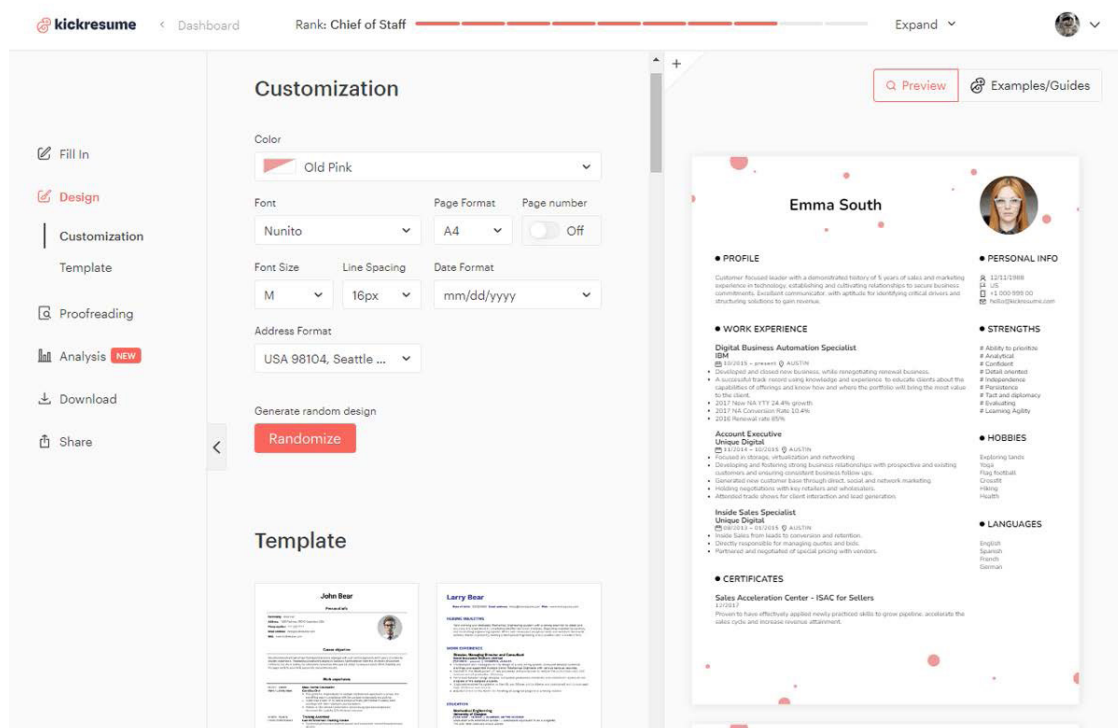

An AI resume writer—like [Kickresume](#), [Rezi](#), and [Skillroads](#)—will do most of that work for you. All you need to do is fill in your job title. Then the AI resume builder will use AI (in Kickresume's case, [GPT-4](#)) to come up with relevant bullet points. You can ask the tool to generate as many bullets as you need, then choose those most relevant to your actual work experience. The tools can also write your resume summary, education, skills, and other sections.

The image shows a user interface for an AI resume writer. It has a light yellow background. At the top, there's a label "Job title" above a text input field containing "Marketing Manager". Below that is a label "Description" above a larger text area containing a single bullet point: "Implemented marketing campa". At the bottom left of the text area is a purple button with the text "AI Writer" and a mouse cursor icon pointing at it.

Artificial Intelligence And Your Job Search And Job Application Journey

Once the writing part is handled, you choose from a bunch of design templates and customise colours, fonts, and more to make it feel true to your personal brand.

The screenshot shows the 'kickresume' customization interface. The top navigation bar includes the 'kickresume' logo, a 'Dashboard' link, a 'Rank: Chief of Staff' indicator, and an 'Expand' button. The left sidebar contains navigation options: 'Fill In', 'Design' (highlighted), 'Customization', 'Template', 'Proofreading', 'Analysis' (marked as 'NEW'), 'Download', and 'Share'.

The main 'Customization' panel on the right allows users to adjust various design elements:

- Color:** A dropdown menu currently set to 'Old Pink'.
- Font:** A dropdown menu currently set to 'Nunito'.
- Page Format:** A dropdown menu currently set to 'A4'.
- Page number:** A toggle switch currently set to 'Off'.
- Font Size:** A dropdown menu currently set to 'M'.
- Line Spacing:** A dropdown menu currently set to '16px'.
- Date Format:** A dropdown menu currently set to 'mm/dd/yyyy'.
- Address Format:** A dropdown menu currently set to 'USA 98104, Seattle ...'.

Below these settings, there is a 'Generate random design' button and a 'Randomize' button.

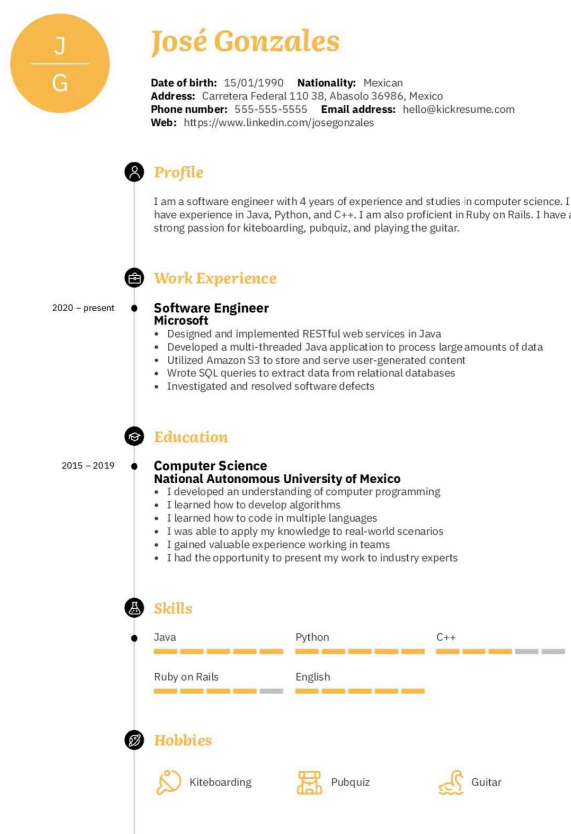

The 'Template' section at the bottom of the customization panel displays two resume templates: 'John Bear' and 'Larry Bear'.

On the far right, a 'Preview' button is visible, and a 'Examples/Guides' link is present. The preview area shows a sample resume for 'Emma South' with the following sections:

- PROFILE:** Customer focused leader with a demonstrated history of 5 years of sales and marketing experience in technology, establishing and cultivating relationships to secure business commitments. Excellent communicator, with aptitude for identifying critical drivers and structuring solutions to gain revenue.
- PERSONAL INFO:** 121110888, 12 US, +1 000 999 000, hello@kickresume.com
- WORK EXPERIENCE:**
 - Digital Business Automation Specialist, IBM** (11/2019 - present @ Austin):
 - Developed and closed new business, while renegotiating renewal business.
 - A successful track record using knowledge and experience to educate clients about the capabilities of offerings and know how and where the portfolio will bring the most value to the client.
 - 2017 New A/R FY1 24.4% growth
 - 2017 New Conversion Rate 10.4%
 - 2017 New Conversion Rate 10.4%
 - Account Executive, Unique Digital** (11/2014 - 10/2019 @ Austin):
 - Focused on design, implementation and networking.
 - Developing and building strong business relationships with prospective and existing customers and ensuring consistent business follow up.
 - Generated new customer base through direct, social and network marketing.
 - Working regularly with key referees and administrators.
 - Affordable trade shows for client interaction and lead generation.
 - Inside Sales Specialist, Unique Digital** (01/2013 - 10/2014 @ Austin):
 - Inside Sales from leads to conversion and retention.
 - Directly responsible for managing quality and leads.
 - Participated and negotiated special pricing with vendors.
- STRENGTHS:**
 - # Ability to prioritize
 - # Analytical
 - # Confident
 - # Detail oriented
 - # Independence
 - # Persistence
 - # Fast and diplomatic
 - # Evaluating
 - # Learning Agility
- HOBBIES:**
 - Enduring tennis
 - Yoga
 - Play Football
 - Golfing
 - Hiking
 - Health
- LANGUAGES:**
 - English
 - Spanish
 - French
 - German
- CERTIFICATES:**
 - Sales Acceleration Center - ISAC for Sellers** (1/2020): Proven to have effectively applied newly practical skills to grow pipeline, accelerate the sales cycle and increase revenue attainment.

Artificial Intelligence And Your Job Search And Job Application Journey

Here's an example of a completed AI-generated resume from Kickresume:

AI resume tools will pull together a draft that's most of the way there for you to work with. Then all you have to do is edit and add your unique-as-a-snowflake personality.

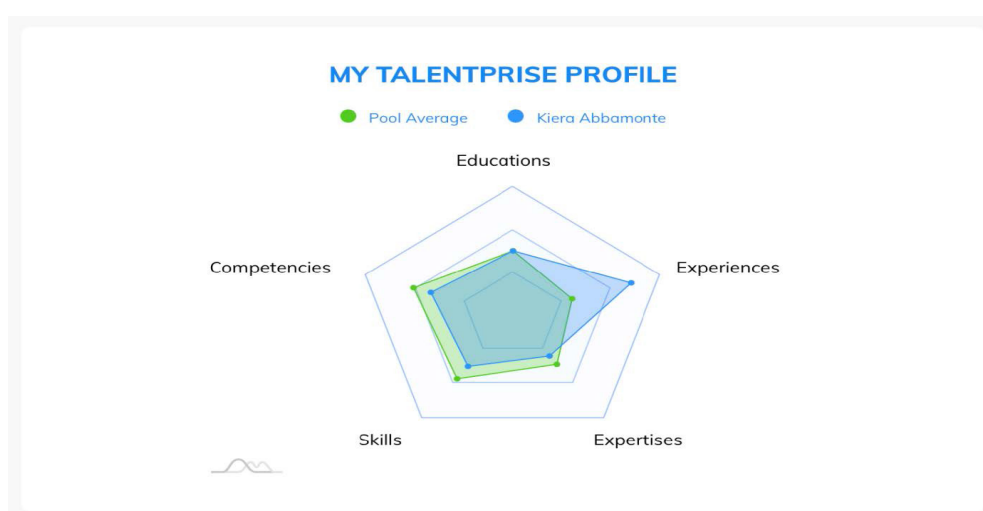

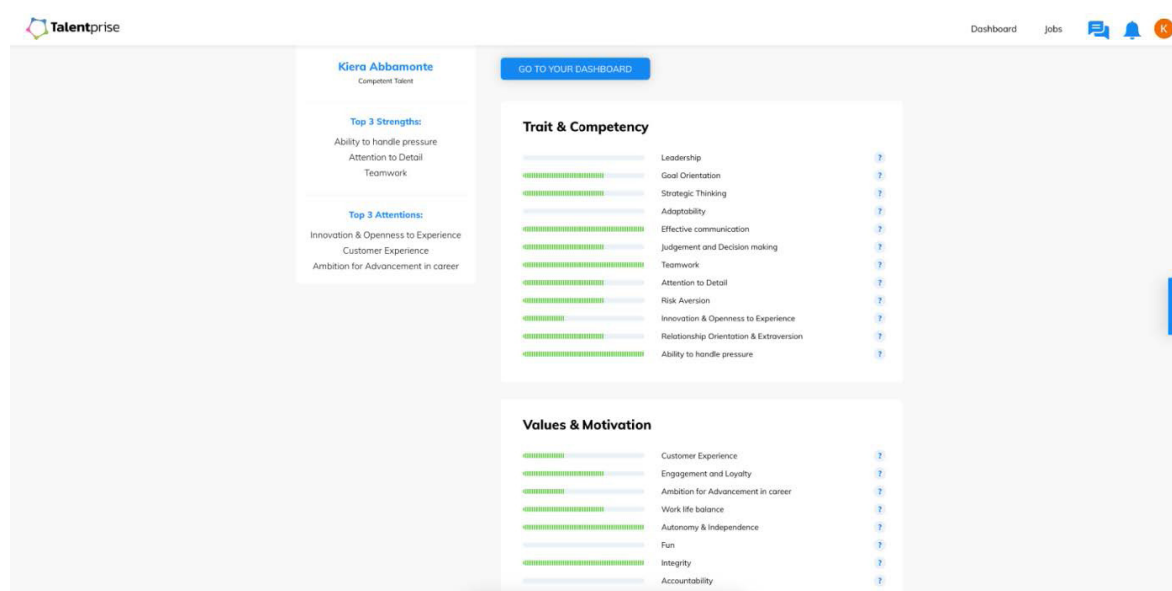

2. AI job matching tools (to help you find good-fit roles)

Sorting through job listings, hunting down requirements and salary ranges, and doing your due diligence on the company culture all eat up valuable energy you could be spending on impressing hiring managers and securing the right role.

Artificial Intelligence And Your Job Search And Job Application Journey

That's where AI job matching platforms can help: they use AI to match you with job listings likely to be a good fit for both sides, based on your skills, experience, and what you're looking for in a company or position. Platforms like [Talentprise](#) and—if you're looking for a remote position—[Pyjama Jobs](#) are good options here. Another platform, [Fortay](#), even offers a quiz to help you narrow in on companies with the right culture fit for you.

With Talentprise, for example, you'll complete a series of questions on your preferences for a job (like location, willingness to relocate, remote vs. in-office, and when you're available to start) and fill out your "biography," which covers resume stuff like work experience, skills, and education. Then, you'll complete the Talentprise assessment, which measures personality and work traits, along with your values and motivation, to create a holistic profile for you.

Artificial Intelligence And Your Job Search And Job Application Journey

Then Talentprise's AI matches you with relevant job listings on the site and surfaces your profile to those recruiters. So once you complete your profile, "applying" to best-fit jobs is as close to a passive endeavor as you could hope for.

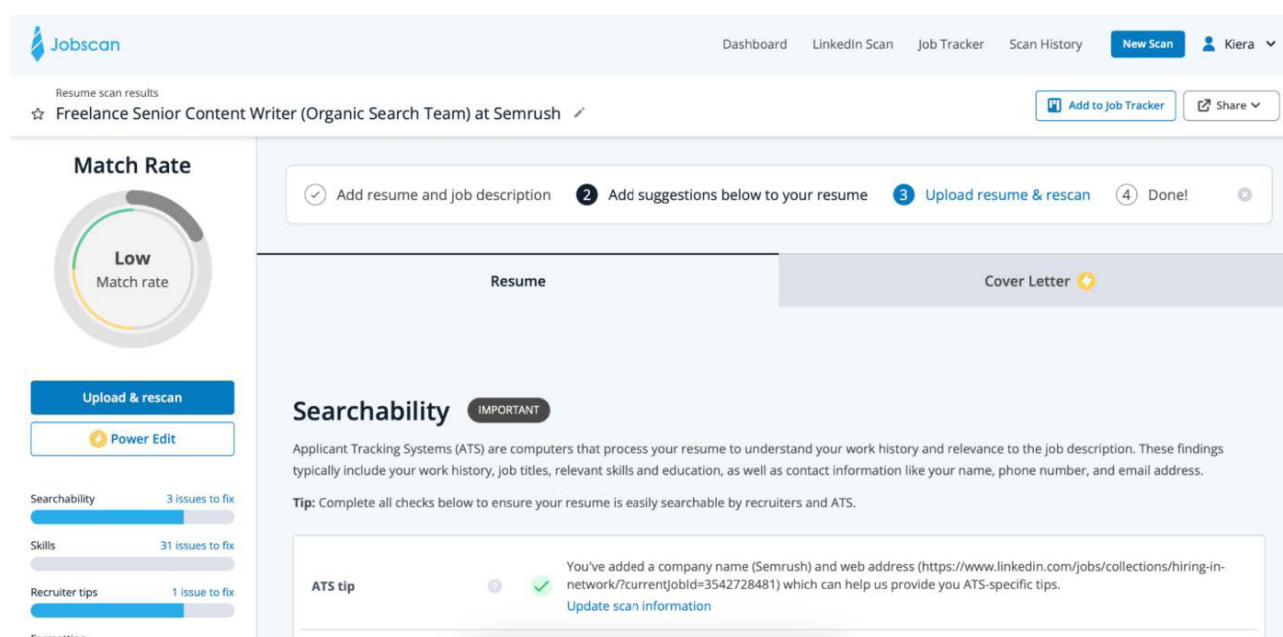

3. AI resume optimization tools (to tailor your resume for specific roles)

The reality of applying for jobs now is much different from what it was a decade ago. Today, many recruiters and hiring managers rely on algorithms and automated [applicant tracking systems \(ATS\)](#) to scan applicant resumes for the right keywords. If those terms don't feature in your resume, you may get kicked to the "no thanks" pile well before a human ever sets eyes on your application—even if your skills and experience are actually a perfect fit.

AI optimisation tools like [Jobscan](#) and [SkillSyncer](#) ensure your resume makes it past discerning ATS algorithms and into the "interview please" pile.

These tools compare your resume, cover letter, and even LinkedIn profile against the keywords found in the job listing you select. They rate how well your resume matches with the role and offer suggestions for how to better optimise your resume for each job.

Here's what a match rate report looks like in Jobscan.

Artificial Intelligence And Your Job Search And Job Application Journey

And here are some of the tips the tool offered to optimize the resume in question, based on the job listing.

Hard skills

HIGH SCORE IMPACT

Hard skills enable you to perform job-specific duties and responsibilities. You can learn hard skills in the classroom, training courses, and on the job. These skills are typically focused on teachable tasks and measurable abilities such as the use of tools, equipment, or software. Hard skills have a high impact on your match score.

Tip: Match the skills in your resume to the exact spelling in the job description. Prioritize skills that appear most frequently in the job description.

Skills Comparison		Highlighted Skills	
Skill	Variations ?	Resume	Job Description
SEO		×	5 Required
SEMrush		×	10
blog	⋮	2	6
digital marketing		×	2
		×	1
		×	1

Recruiter tips

IMPORTANT

Word count	?	✓	There are 127 words in your resume, which is under the suggested 1000 word count for relevance and ease of reading reasons.
Measurable results	?	⚠	We found 0 mentions of measurable results in your resume. Consider adding at least 5 specific achievements or impact you had in your job (e.g. time saved, increase in sales, etc).
Job level match	?	✓	You are applying to a(n) senior level role. Given your 12 years of experience, this role is a great fit for your experience.
Words to avoid	?	✓	The tone of your resume is generally positive and no common cliches and buzzwords were found. Good job!

Artificial Intelligence And Your Job Search And Job Application Journey

4. AI cover letter generators (to write a cover letter draft)

Writing personalized cover letters for each role is possibly the biggest time suck when applying to jobs—but it's also necessary to make an impression. AI-powered cover letter generators like [Kickresume](#) and [CoverDoc.ai](#) (which was one of our [2023 No-Code Day Contest winners!](#)) make the process a whole lot faster and easier.

Create Cover Letter

Artificial Intelligence And Your Job Search And Job Application Journey

Provide some basic details about the job you're applying for, your writing style, and your LinkedIn profile, and the tool will generate a personalised cover letter draft for you. Here's what CoverDoc came up with based on a random sample LinkedIn profile and the job listing from the screenshot above.

Draft cover letter for Nike | Digital Copywriter

Dear Hiring Team at Converse,

It was recently brought to my attention that Nike, Converse's parent company, is donating over \$125 million to organizations addressing social and racial injustice, and I wanted to take this opportunity to show my support! I'm excited to be applying for the Digital Copywriter role and believe my 8 years of content writing experience in the SaaS and B2B space, coupled with my passion for social justice, would make me an asset to the Converse team.

Having written countless blog posts, long form content, and digital marketing material for companies like Databox, Zapier, Hotjar, mParticle and Shopify, I am confident I can help the Converse brand develop digital content and storytelling that resonates with their Gen-Z consumer. My creative and innovative writing style, combined with my understanding of current digital and e-commerce trends, make me your perfect candidate for this role.

I'm a self-starter with a positive and hard-working attitude, and I understand the importance of crafting compelling and effective product stories across the digital ecosystem. I'm experienced in using my exceptional writing skills to write easy-to-understand communications pieces and have the ability to work independently and collaboratively with the team in brainstorming creative solutions. I'm passionate about the Converse brand and believe my knowledge and expertise will help tell the Converse story to our people.

I'm confident that I have the necessary qualifications, experience, and attitude to join the Converse team and would love to be given the opportunity to do so.

Thank you for considering my application.

Yours Sincerely,
Kiera Abbamonte

I may change one or two things here, but it is an excellent starting point!

A specialised AI cover letter tool like CoverDoc streamlines the prompt process, but if you're already comfortable using another tool, just about any generative [AI writing tool](#) can take care of your cover letter too.

Artificial Intelligence And Your Job Search And Job Application Journey

I hope it goes without saying that you'll need to review and edit the cover letter to make sure it accurately reflects your skills and experiences and showcases your personality. But starting with a solid draft from an AI tool can be a huge boost in the initial stages of the job application process.

5. GPT Google Sheets add-on (to personalize networking at scale)

Networking—when done in a tasteful, genuine way—can be an effective way to connect with potential employers and industry contacts. But it can be challenging to personalize these messages at scale. That's why most cold outreach is, well, crap.

One approach is to use the GPT for Sheets add-on to generate personalized outreach messages en masse within Google Sheets. Input a list of recipients and some basic information about each person (e.g., their name, job title, and company), and the tool will generate a unique message for each person based on this data.

first_name	last_name	profile_link	job_title	company_name	icebreaker	Prompt
						Pls create 1 line of the cold email intro so I give you a company name and you return back
						"I've noticed the [the title of the article about this company on media and where it was published], it's extremely interesting to know that [details of the article], so I've checked what [companyname] is doing and might say that you're doing a great job in [brief summary of company is doing]."
						I want you to put the media that you know and feel might be fit for this case

Artificial Intelligence And Your Job Search And Job Application Journey

In a post on Expandi's blog, Ilya Azovtsev shares a [detailed how-to for using the add-on](#). Azovtsev also shares how you can use AI to personalize outreach messaging based on the recipient's LinkedIn profile, tweets, psychological AI, and post engagement. (The article focuses on selling via LinkedIn, but the tactics apply to networking of any kind, via any channel.)

first_name	last_name	profile_link	job_title	company_name	Icebreaker
Sjoerd	Gö	https://www.linkedin.com/in/sjoerd-go/	Chief Sales Officer	Teamleader	I've noticed the recent article about Teamleader on Forbes, it's extremely interesting to know that they've raised \$22 million in funding, so I've checked what Teamleader is doing and might say that you're doing a great job in providing all-in-one software for CRM, project management, and invoicing.
Rob	Klij	https://www.linkedin.com/in/rob-klij/	VP of Sales at T	Trengo - Smart	I've noticed the recent article about Trengo on Forbes, it's extremely interesting to know that they're revolutionizing customer communication with their smart conversations platform, so I've checked what Trengo is doing and might say that they're doing a great job in streamlining communication for businesses.
Anisa	Be	MBA https://www.linkedin.com/in/anisa-be/	Snr. Director of S	KnowBe4	I've noticed the recent article about KnowBe4 on Forbes, it's extremely interesting to know that they've raised \$300 million in funding, so I've checked what KnowBe4 is doing and might say that you're doing a great job in providing cybersecurity training to businesses.
Melvin	Ro	https://www.linkedin.com/in/melvin-ro/	Head of Sales -	Epson Europe B	I've noticed the recent article about Epson Europe B.V. on TechRadar, it's extremely interesting to know that they're revolutionizing the printing industry with their EcoTank technology, so I've checked what Epson Europe B.V. is doing and might say that they're doing a great job in providing sustainable printing solutions.
Chris	Mc	https://www.linkedin.com/in/chris-mc/	Head of Sales E	Atlassian	I've noticed the recent article about Atlassian on Forbes, it's extremely interesting to know that they have doubled their revenue in the past year, so I've checked what Atlassian is doing and might say that you're doing a great job in revolutionizing team collaboration tools.
					I've noticed the recent article about CitizenLab on TechCrunch, it's extremely interesting to know that they're empowering citizens to participate in decision-making processes, so I've checked what CitizenLab is doing and might say that you're doing a great job in promoting

Once again, you'll need to review each message and make sure it's authentic to who you are as a professional, but this tool can streamline the outreach process by a massive amount.

Artificial Intelligence And Your Job Search And Job Application Journey

6. Zapier (to automatically draft emails)

If you've been job hunting for a while, you've probably found yourself drafting nearly identical email responses to recruiters and hiring managers over and over. It's tedious, but short of using the same email template for every response—not usually a winning strategy—what can you do?

[Zapier](#) can connect your Gmail inbox with GPT to automate bespoke emails. Using the same process outlined in [this blog post on using GPT and Zapier to write emails](#), you can use AI to generate unique follow-ups, thank-you emails, and other job hunt responses you frequently need.

When you receive an email from a recruiter or hiring manager, you can mark it as, say, “job hunt.” Once you add the label to an email, the automation pulls that information and uses it to generate a prompt for GPT. Then, Zapier uses the GPT response to create a draft in your Gmail.

So in a matter of minutes, and all behind the scenes, you have a fully drafted email ready to go—all you have to do is review and hit send.

Zapier is a no-code automation tool that lets you connect your apps into automated workflows, so that every person and every business can move forward at growth speed. Learn more about [how it works](#).

7. AI-powered interview coaching tools (for interview practice and feedback)

[Interviews can be nerve-racking](#), but AI-powered interview coaching tools like [Interview Warmup](#) from Google can help you practice and get feedback in a low-stakes environment.

These tools simulate a real interview and give you personalized feedback based on your responses. It can help you identify areas where you need to improve, like body language, tone of voice, or specific interview questions you struggled with.

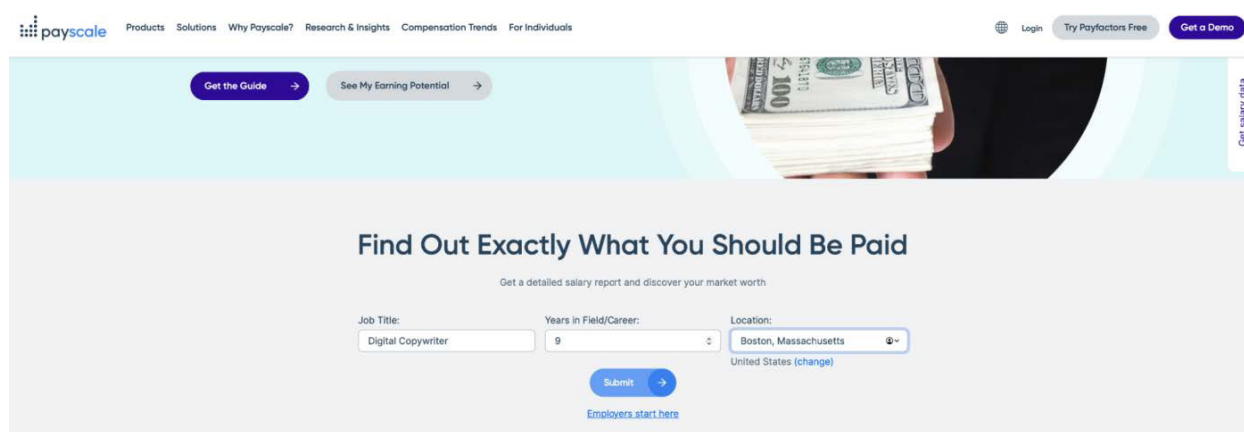

By practicing with these tools, you'll feel more confident and prepared for those higher-stakes real interviews. You'll also have a better sense of what to expect, which can help calm your nerves and let you focus on nailing that first impression.

Artificial Intelligence And Your Job Search And Job Application Journey

8. AI-powered negotiation tools (to get the best offer)

Negotiating your salary can be a fraught process—especially if you’re not sure what a fair salary range looks like for your position and experience. AI-powered compensation tools like [Payscale](#) can help.

These tools use AI to analyze data from thousands of job listings and salary surveys to provide you with an estimate of what you should earn based on details like the job title and your experience, education, and location. They can also offer insight into the benefits and perks you should ask for—like flexible hours or [remote work options](#). Plus, you can fill out granular information on any existing job offers you have to see how they stack up.

The screenshot shows the Payscale website's salary calculator interface. At the top, there's a navigation bar with links like 'Products', 'Solutions', 'Why Payscale?', 'Research & Insights', 'Compensation Trends', and 'For Individuals'. Below this, there's a header section with a large image of a stack of money and the text 'Find Out Exactly What You Should Be Paid'. The main form area has three input fields: 'Job Title' (with 'Digital Copywriter' entered), 'Years in Field/Career' (with '9' entered), and 'Location' (with 'Boston, Massachusetts' entered). There's a 'Submit' button and a link to 'Employers start here'.

By using these tools to research salaries before you sit down at the negotiating table, you’ll have a better sense of what to expect and be better equipped to make a strong case for what you deserve.

Artificial Intelligence And Your Job Search And Job Application Journey

9. Your brain (for being a human)

AI can add a ton of speed—and scale—to your job hunt. But quick reminder: both you and the hiring manager are human. When you're applying to and interviewing for a new job, your application materials need to speak to who you are and what you're looking for in a role and company. And they need to be honest: your new company will figure it out very quickly if you don't actually have the skills and strengths the robot made it sound like you have.

While AI can help you move more quickly, it's always worth investing the time to ensure the results represent you, the human. Not to mention, other applicants will be using AI, too, so if you don't humanise your application materials, you won't be able to cut through the noise.

In conclusion, all the talk about artificial intelligence these days seems to be around the jobs it could replace. But new generative AI tools can help you find one too!

In this guide, I have detailed the different AI tools that can make several aspects of the job search and job application process easier and smoother for the job seeker.

By harnessing the power of artificial intelligence, these tools can save time, increase efficiency, and enhance the overall quality of your job search and job application materials and processes.
